Contents Excel part of Course

1. Get started with Excel
2. Formulas and Functions
3. Graphics
4. PivotTables

The screenshot displays the Microsoft Excel interface with a PivotTable titled '06-filtrar-tablas-dinamicas - Excel'. The PivotTable is set to show 'Comisión' (Commission) as the filter and 'Meses' (Months) as the columns. The data is summarized by city (Filas) and includes a 'Total general' (Grand Total) row.

Comisión	ene	feb	mar	Total general
Boston	1460	365	730	2555
Cancún	199	398	962	1559
Chicago	597	796	597	1990
Dallas	374	374	1309	2057
Duluth	596	298	596	1490
Filadelfia	399	1197	399	1995
Los Ángeles	1475	590	885	2950
Nueva York	1047	1396	3839	6282
Toronto	1396			1396
Washington, D.C.	1197	1197	399	2793
Total general	8740	6611	9716	25067

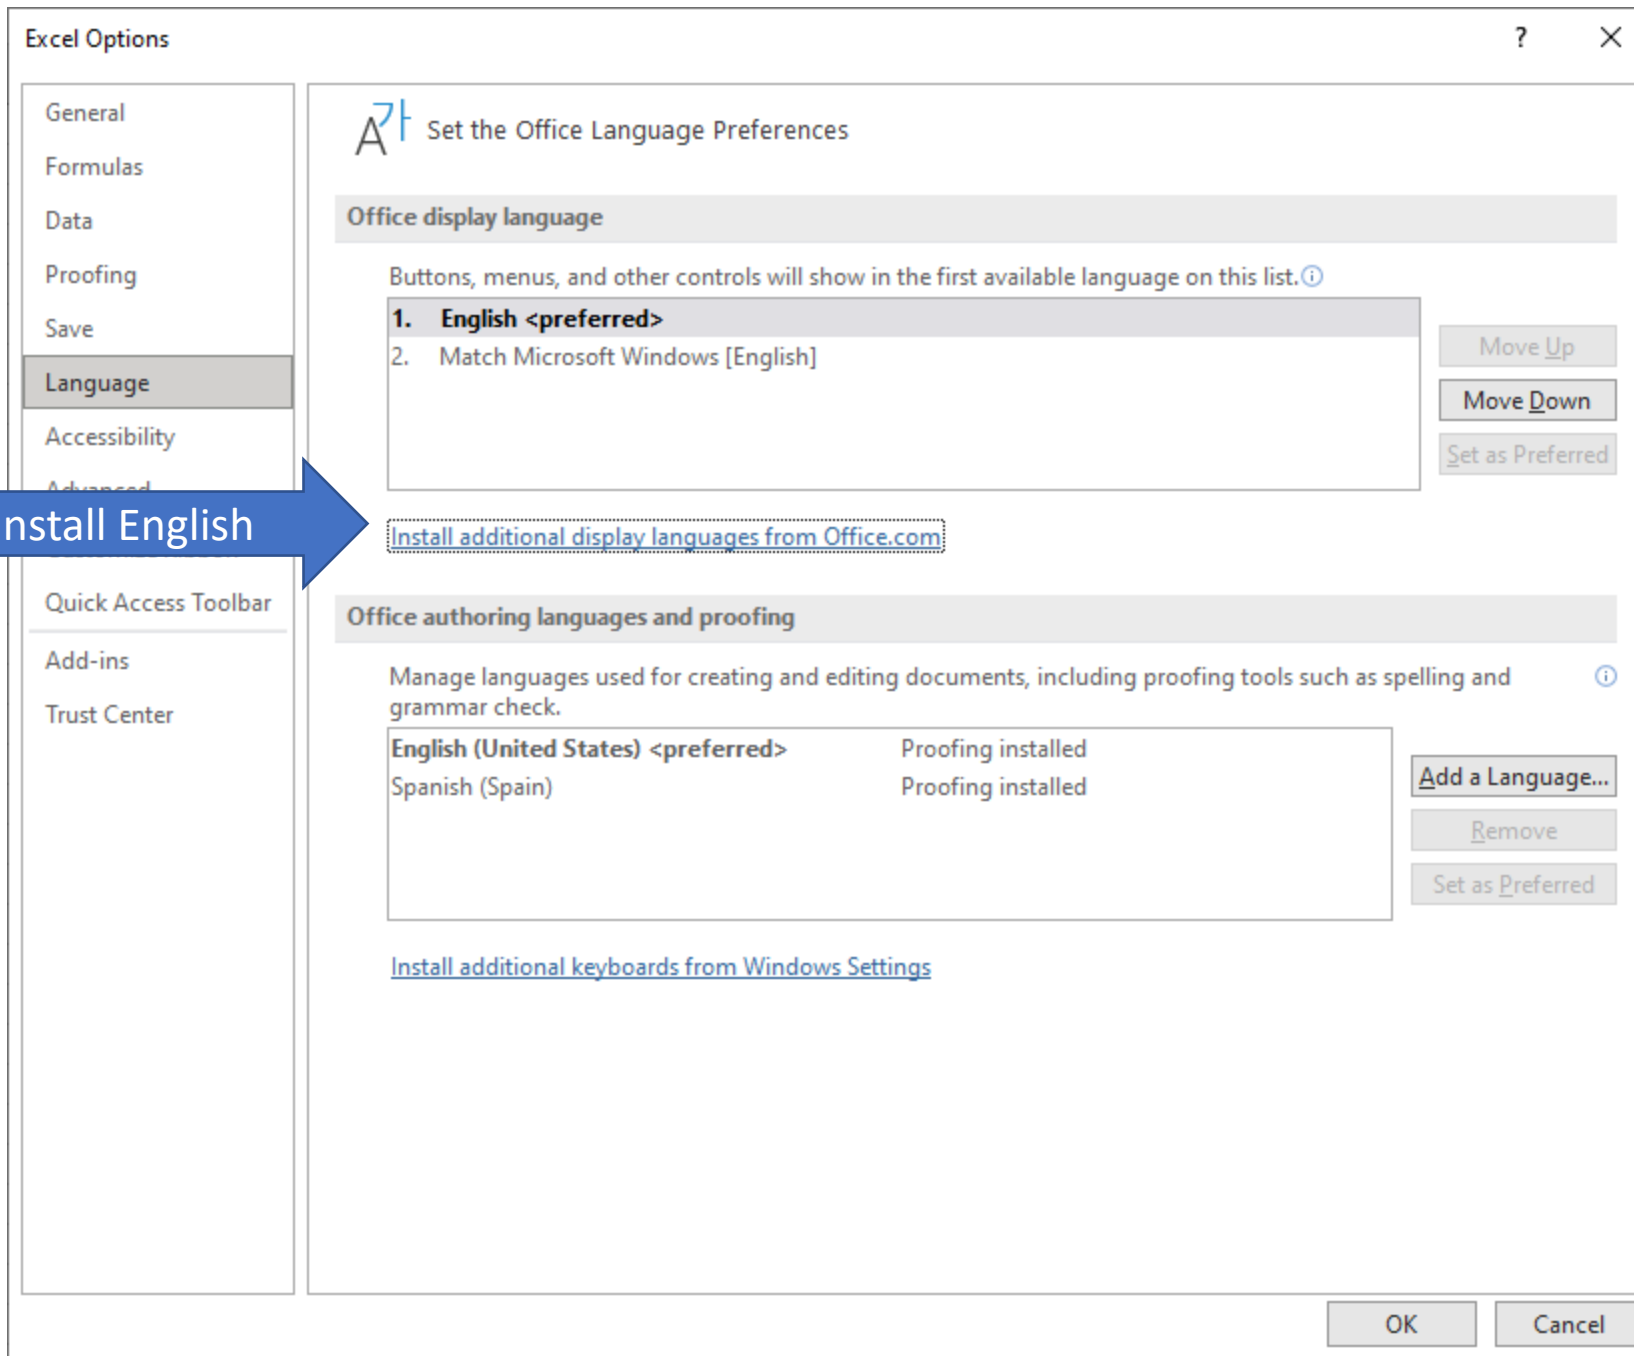

The 'Campos de tabla.' task pane on the right shows the following configuration:

- Seleccionar campos para agregar al informe:**
 - ☐ Boletos
 - ☐ Total
 - ☒ Comisión
- Arrastrar campos entre las áreas siguientes:**
 - Filtros:** Comisión
 - Columnas:** Meses
 - Filas:** Destino
 - Valores:** Suma de C...
- Aplazar actualización del...** (button)
- Actualizar** (button)

A red circle with the number '1' highlights the 'Filtros' section in the task pane.

How to change the language to English

- [Instructions](#)
- Do I have to change the language? Long story short, yes. The class and my copy of Excel will be in English. English formulas work in any version/language of Excel, but some things/menus are called differently so you will have an easier time following the class if you switch to English. You can always go back to Spanish language after your class following the same instructions above.
- Since your Windows copy is still in Spanish, your Keyboard will work as normally it would, but you will run into issues with the decimal point being different in English ("," instead of ",") and also the English version cannot handle accents in names. This will happen to me too as I will use some datasets that are in Spanish, I will show you how to fix this problem when we encounter it.

How classes will work

- In the slides you have links to reference materials, most of them from the Excel developer company, Microsoft.
- In the links you will find the necessary information to understand the concepts that we are going to see in the class in a practical way.
- It is necessary that you **look at these materials in advance** and get used to using them to solve doubts.
- In class we will work in a practical way these concepts, but in order to follow the practice you have to look at the materials provided, including both links and videos.

Piece of advice

- Buy a (computer) mouse. You can use the trackpad, but unless you're really good with it, you're going to have problems if you don't use a mouse.
- Tablets will not cut it for the Excel part. You're going to have to use a laptop.
- If you have a Mac, your experience is going to be different.

How classes will work

- You'll be provided with different datasets, which you'll need to download from Canvas to follow Excel sessions.

You can always check which dataset we are using by looking at the slides, the dataset used will be indicated by the Excel logo.

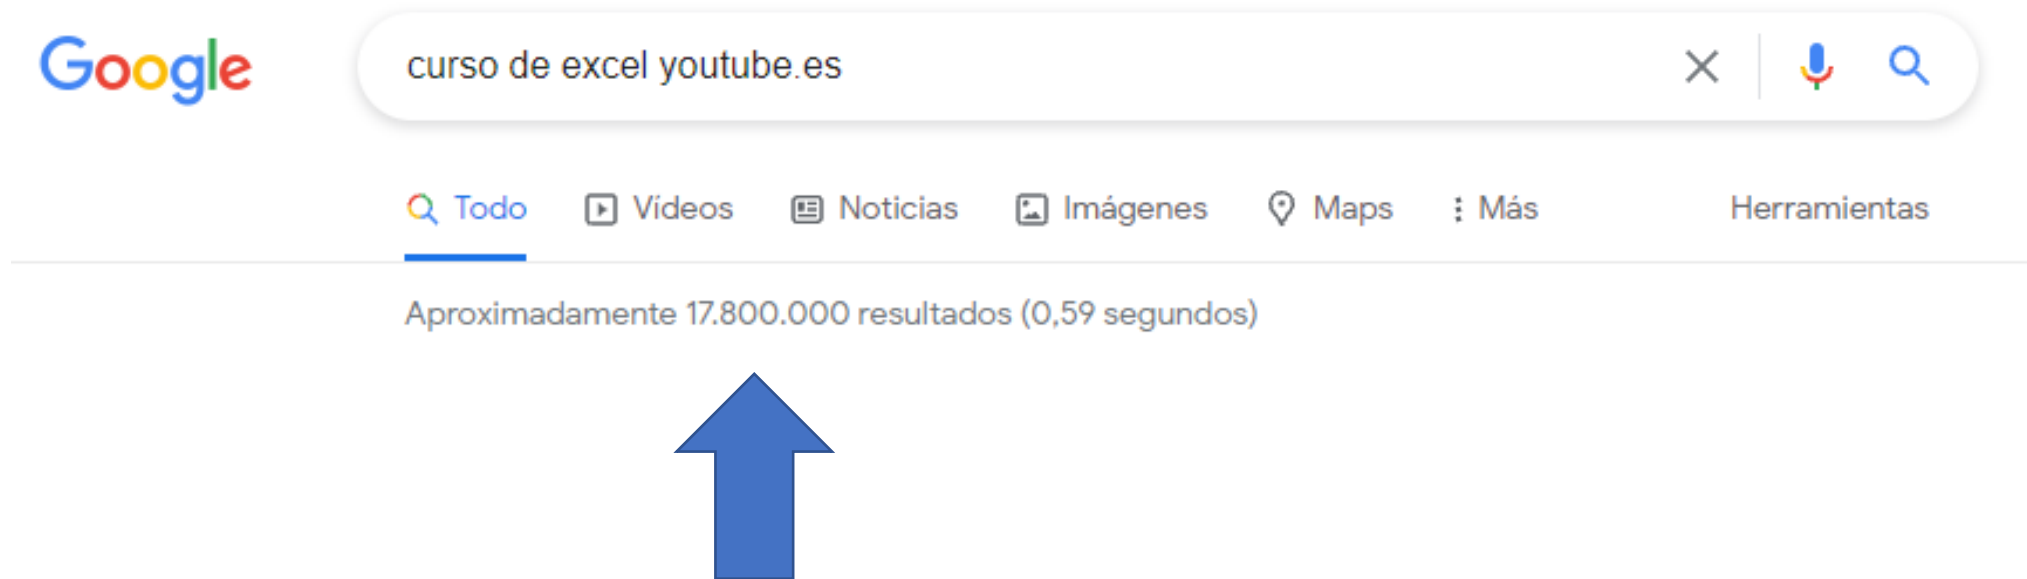

I'll provide links to YouTube videos with content relevant to the topics covered, but there are many more out there.

How classes will work

- Additional resources can be found on YouTube and many other sites on the web.

How classes will work

- You have to follow the teacher when we practice the different concepts.
- You'll need to take notes and pay attention.
- We'll go over the same concepts several times with different datasets, so you have first-hand experience with Excel, but you have to prepare the topics beforehand.
- You will have exercises to practice at home.
- If you have trouble following the demos, let me know!

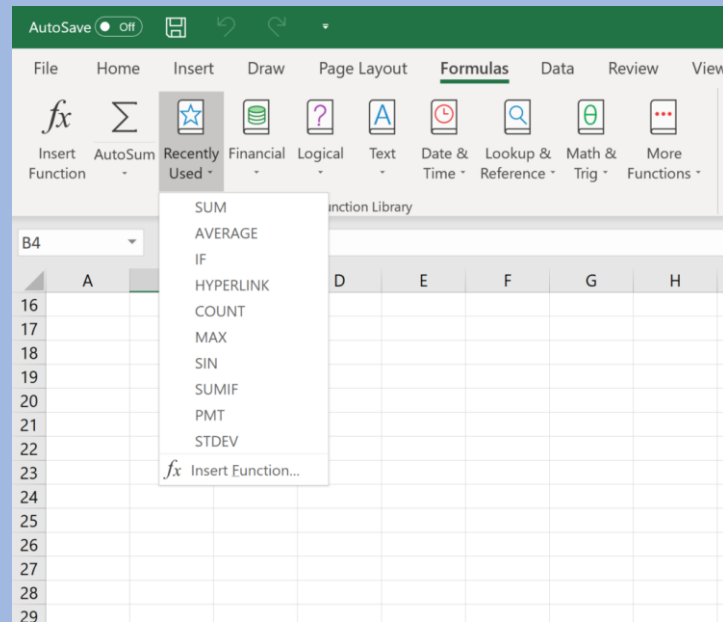

How classes will work

- You have to save in a folder the Excel files with which we work in each class, we will use them in more than one session.

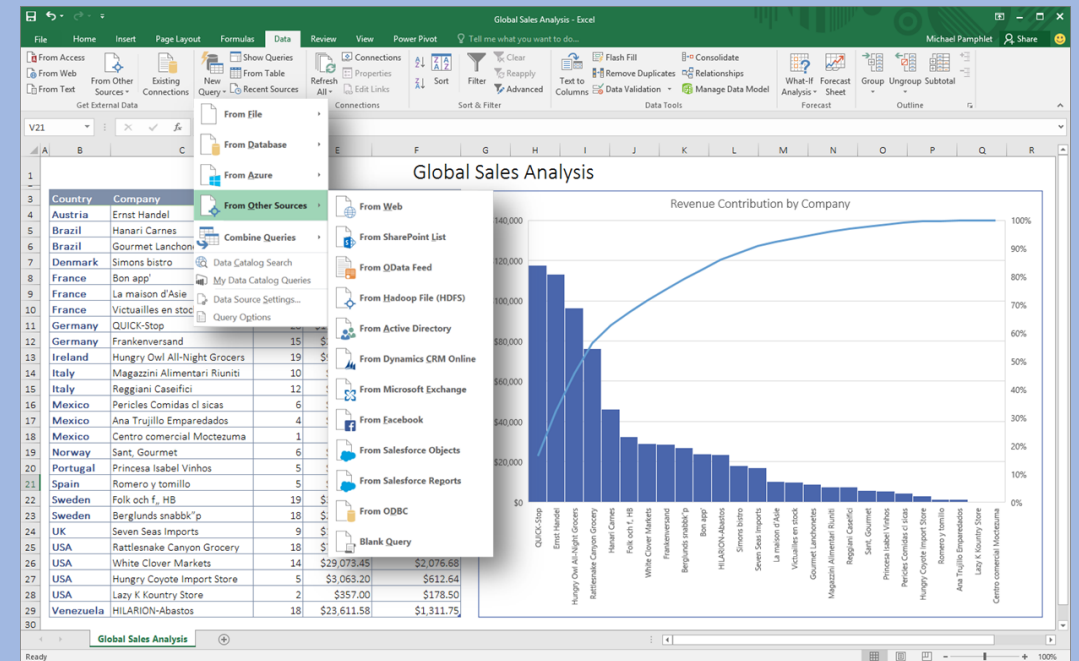

Plan for Excel training

First 4/5 weeks: Basic Excel (Basic, Formulas and Graphs)

Last 2/3 weeks: Advanced Excel for exploratory data analysis

Learning outcomes of this session

- In this session we present Excel, talk about its advantages and disadvantages and begin to show the basics that must be mastered before using it for real data analysis.

Why Excel?

- The most widely used individual productivity tool in the business world.
- Companies ask for it.
- You will use it in later courses here at CUNEF.
- Excel is great for initial approaches like exploratory data analysis.

Learning Outcomes - The Basics (I)

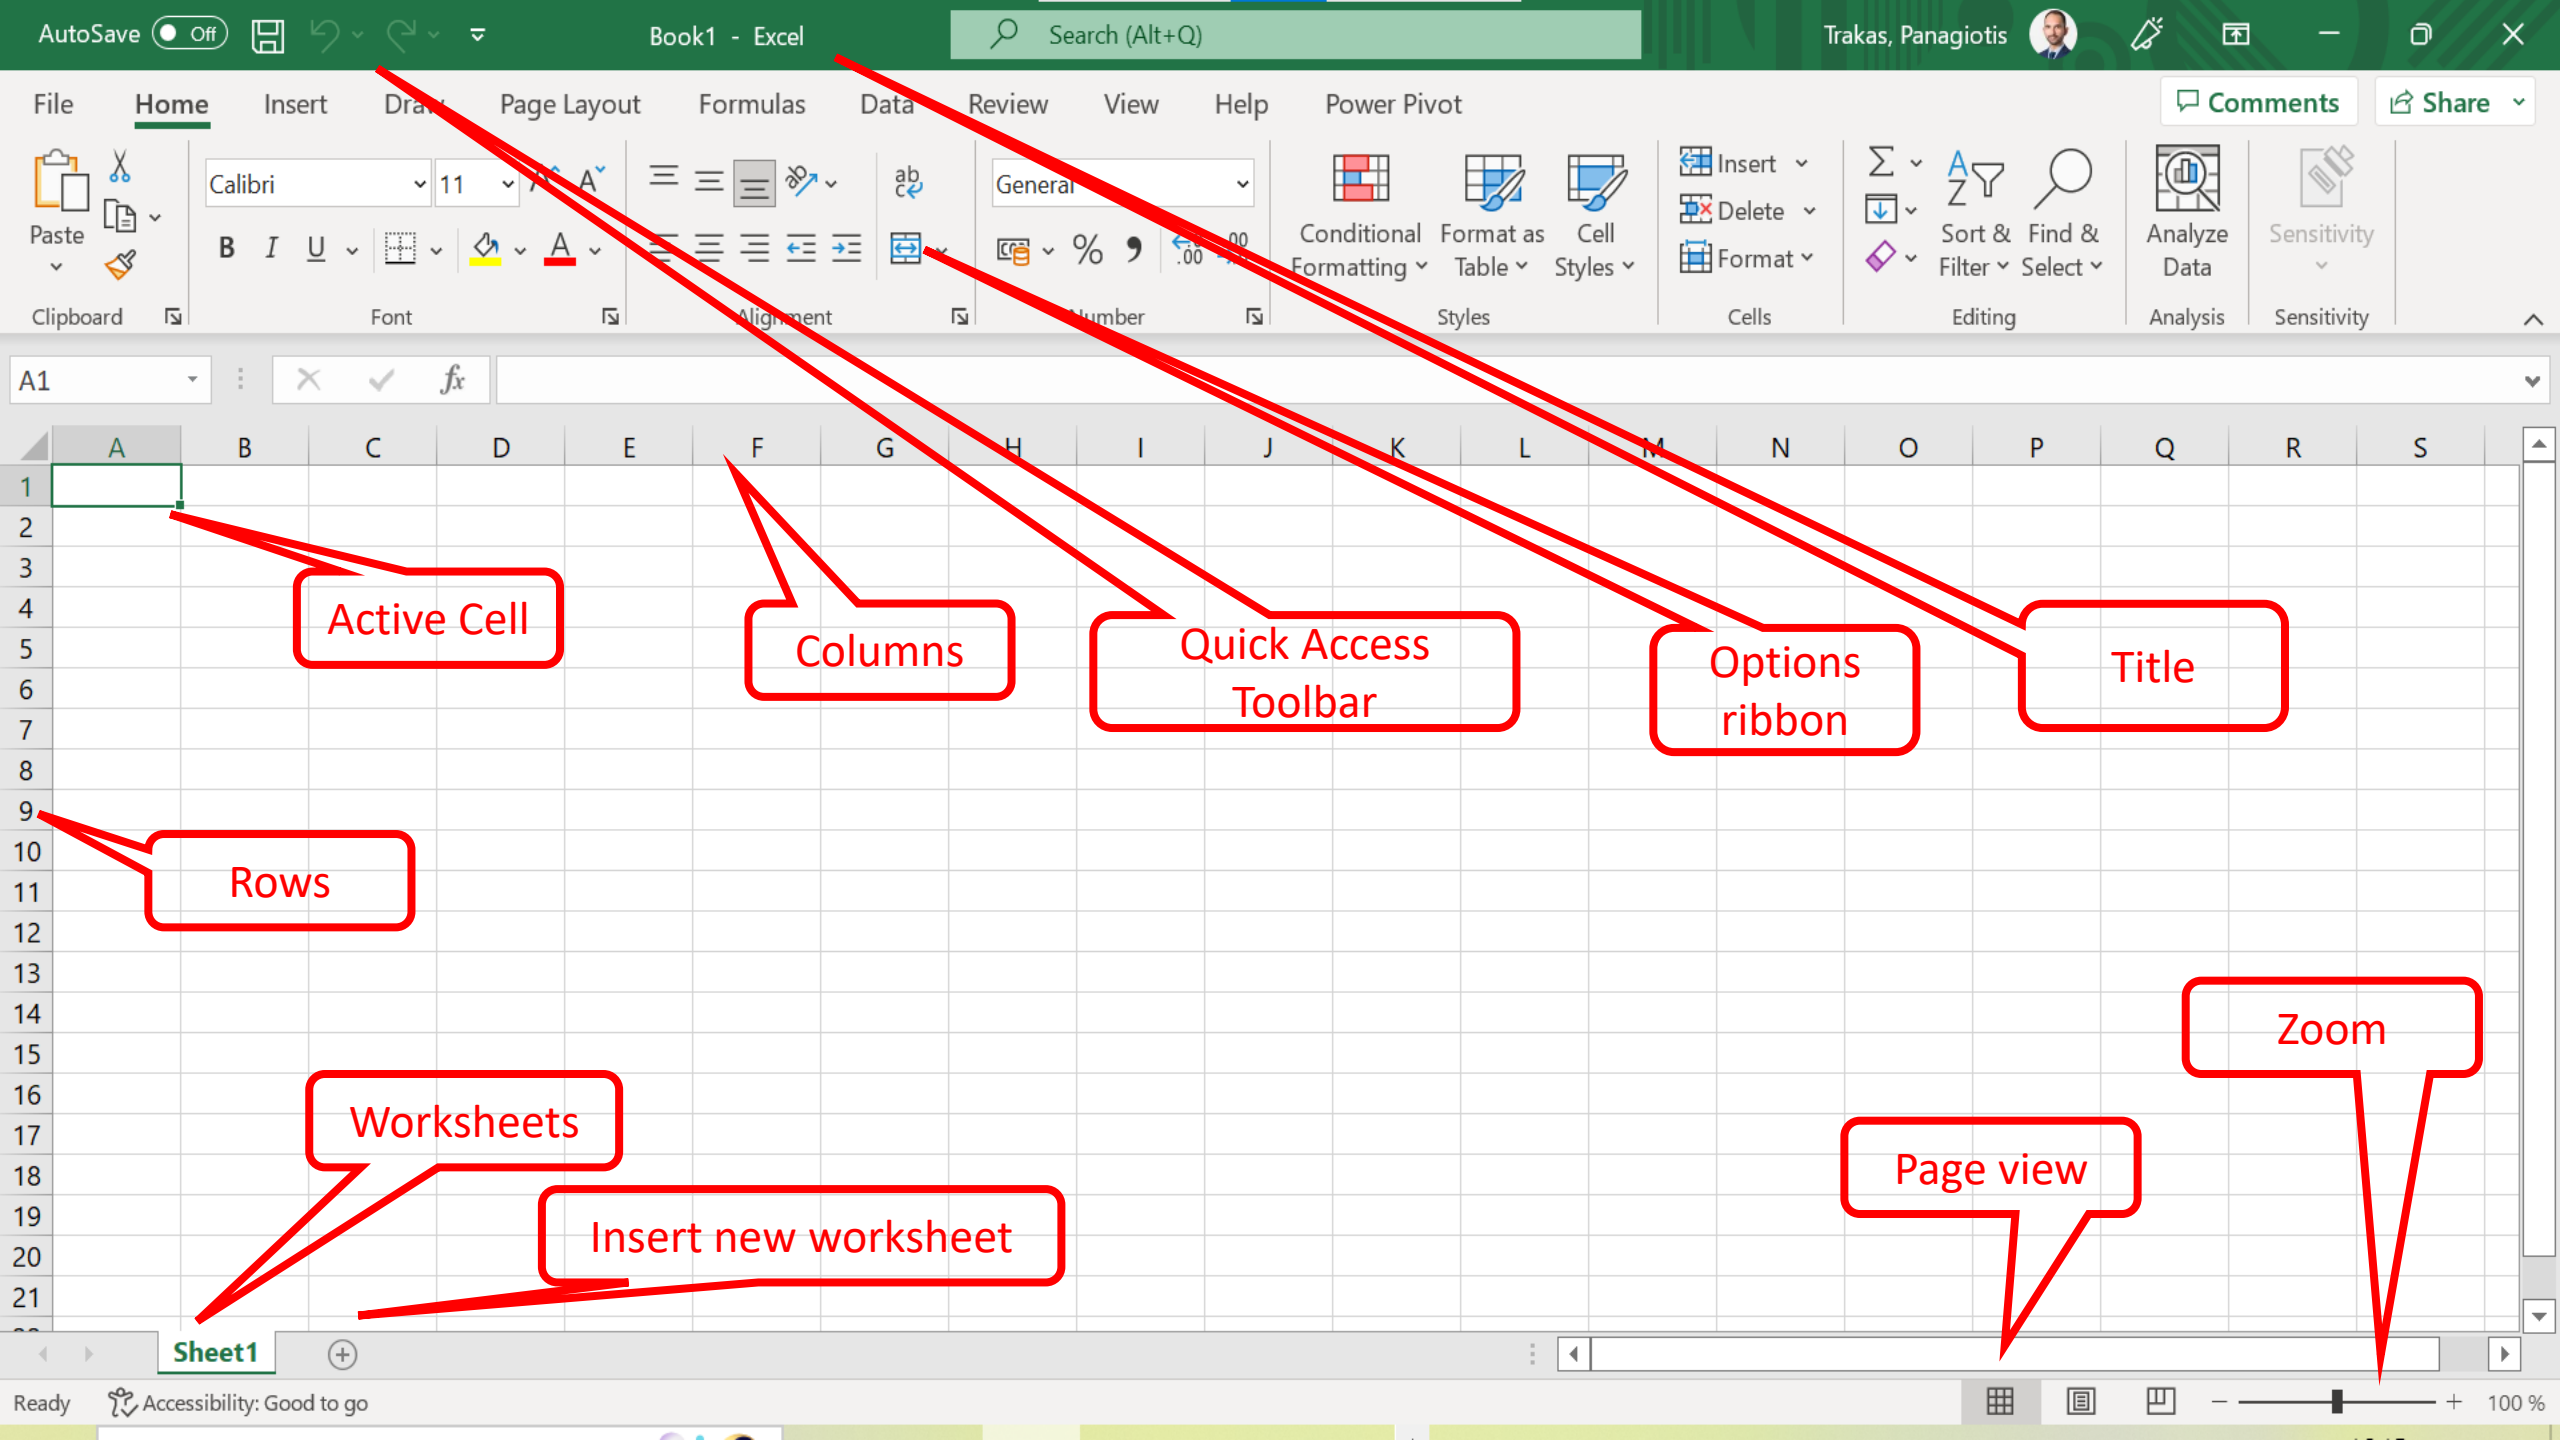

1. Understand the concepts of spreadsheets and the Microsoft Office Excel environment.
 1. Identify Excel terminology and items.
 2. Recognize the main terms used to describe working with Excel
2. Use keyboard or mouse shortcuts to select cells and ranges in a worksheet.
3. Create, open, and view a workbook.
 1. Create your first Excel file, enter data, and create a table.
 2. Save and print books.
4. Modify a sheet and a workbook.
 1. Enter and edit data.
 2. Basic quick format.
5. Create a data table, filter and sort data.
6. Work with cell references.
 1. Learn how to work with absolute and relative cell references, and techniques for copying formulas.

Basic Excel -1

- Examine spreadsheet concepts and explore the Microsoft Office Excel environment.
- Identify Excel terminology and items.
- Recognize the main terms used to describe the Excel workspace.
